ABSTRACT OF THE DISCLOSURE

The cart to lift barrels is a new way of lifting barrels. It has an improve lift handle with an upper angular shape grip that finds the center of gravity of the barrels when lifting the barrel. It also has a new style rounded support or curve shape on the bottom of the cart that helps the barrel to be locked in place and helps the barrel not to slip to a side when carried. The cart to lift barrels in addition has a hook on the top that will fasten the barrel from the top in place with different positions that will aloud fasten different size barrels.
